

The leader in thermal remediation offers a new optimized, efficient, cost-effective solution for qualifying sites.

- Simplified design process
- Expedited permitting
- Simple heater borings
- Standard heating systems
- Pre-engineered treatment systems
- Duration optimized based on monitoring
- Simplified reporting

**What is *TerraTherm Tier One* Pricing?**

Through continuous improvement in our processes, application of extensive value engineering and use of sustainable methodologies, we have developed an expedited project delivery approach. Intended for use at “smaller” thermal sites, it is based on simplified design deliverables, standardized heating systems, and a modular pre-engineered treatment system. The essential data are collected, and the thermal process is optimized so the time and energy needed for reaching remedial goals is minimized. *TerraTherm Tier One* gives you TerraTherm quality and results at a reduced price with the benefit of TerraTherm’s proven track record, knowledge base and range of heating technologies. With *TerraTherm Tier One* pricing, you get all of the technology, expertise and finely-honed implementation skills that we apply to the most complex projects but at a highly competitive price.

5 Ways We Have Reduced Cost:

1. Pre-engineered solutions
2. Plug and play equipment components
3. Sustainability analysis and energy optimization
4. New centralized workshop to build and maintain a large fleet of equipment
5. Improved accuracy of subsurface models and data management - no energy wasted, essential data provided.

Qualifying Sites – Characteristics:

Smaller treatment zones, simple geology, modest chemical mass, expedited regulatory process, well-defined objectives, volatile contaminants (such as CVOCs).
